1 Introduction

This document specifies the requirements for the Autonomous Emergency Braking (AEB) system of passenger cars (category M1). It is intended for suppliers responding to the request for quotation.

2 Scope

The AEB system detects vehicles ahead and warns the driver. If the driver does not react, the system brakes automatically to avoid or mitigate a collision.

3 Activation and Braking

AEB-001 Operating speed range

The AEB system shall be active at vehicle speeds between 10 km/h and 60 km/h.

AEB-002 Minimum activation speed

The AEB system shall not be active below 15 km/h.

AEB-003 Braking reaction

The system shall brake fast when a collision is imminent.

Note: Speed values refer to the speed shown on the vehicle speedometer.

4 Driver Warning and Interaction

AEB-004 Collision warning

The system shall warn the driver at least 0.8 s before emergency braking starts.

AEB-005 Warning type

The collision warning shall be acoustic and visual.

AEB-006 Driver override

The driver shall be able to interrupt emergency braking by pressing the accelerator pedal.
